Acquaintance with Ermine

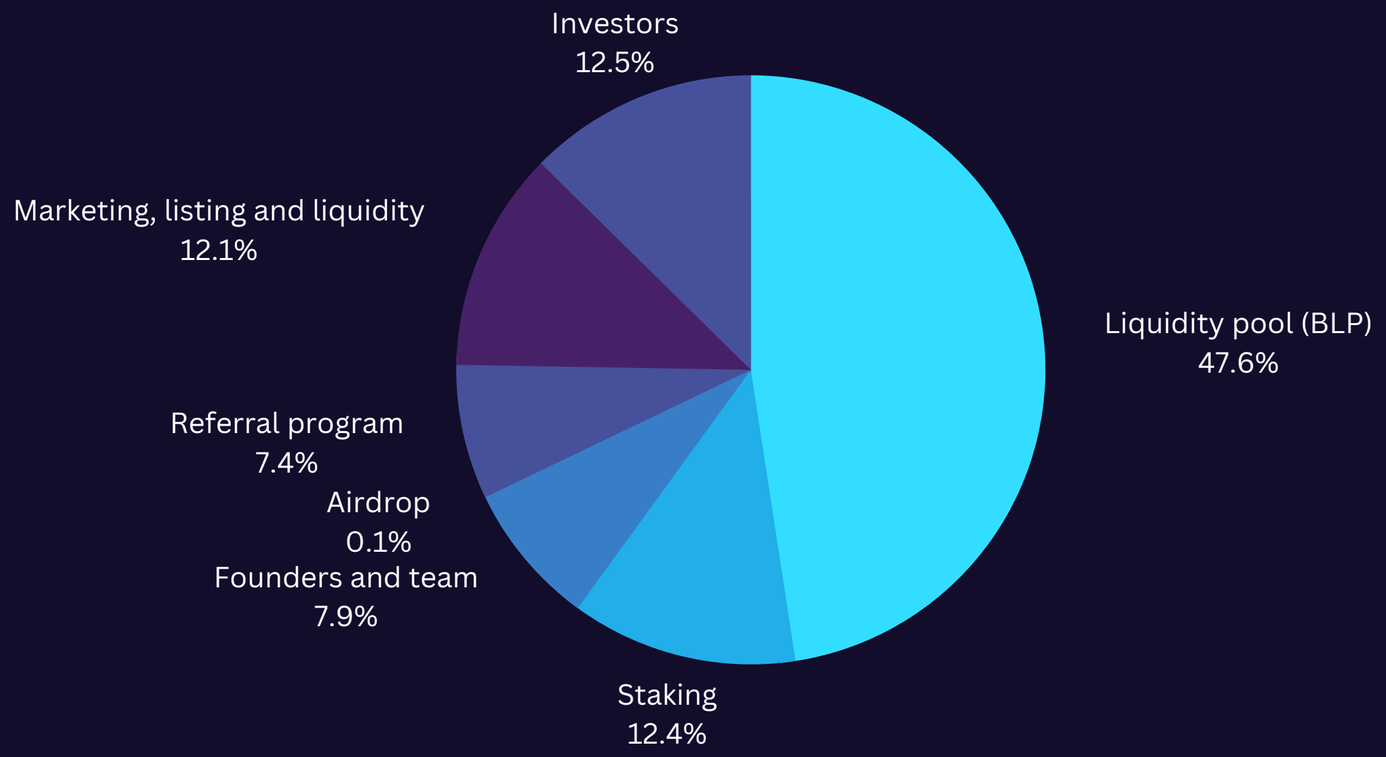
Ermine is a DeFi Web3 application built on the Ethereum network that allows you to earn income from virtual mining, staking, referral program and exchanges.

Ecosystem Ermine

- ✓ Ermine Token (ERM)
- ✓ Ermine virtual miners (EVM)
- ✓ Ermine Store
- ✓ Decentralized referral program invite-and-earn
- ✓ Bonus pools (staking)
- ✓ Liquidity pool (BLP) with ReturnVM system
- ✓ Yield smart contracts (YSM)
- ✓ Pools for mining (PPM)

Tokenomics Ermine

Ermine token (ERM) is needed to get access to the most profitable mining pools and get status in the referral program.
The ERM token can be deposited into bonus pools and receive income from staking.
Total supply 800,000,000 ERM (ERC-20)



Ermine Virtual Miners

A virtual miner is an NFT (EVM).
A total of 12 miner models will be released with a fixed total supply.
Each miner model has performance (IPS) and value measured in Ethereum cryptocurrency.
The more productive the miner, the lower the price for 1 IPS.

The performance, total supply and price of the EVM are predetermined in the smart contract and cannot be changed.

Miner Ermine Bit

Perfomance 1 IPS

Price 0.07 ETH

Miner Ermine Byte

Perfomance 8 IPS

Price 0.50 ETH

Miner Ermine ECO

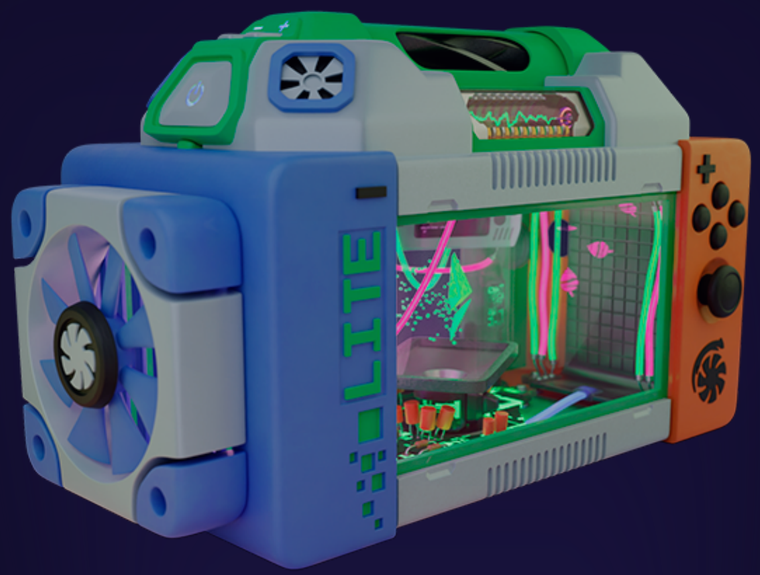
Perfomance 12 IPS

Price 0.71 ETH

Miner Ermine Lite

Perfomance 38 IPS

Price 2.14 ETH



Miner Ermine Master

Perfomance 64 IPS

Price 3.56 ETH

Miner Ermine Expert

Perfomance 132 IPS

Price 7.14 ETH

Miner Ermine PRO

Perfomance 198 IPS

Price 10.57 ETH

Miner Ermine PRO MAX

Perfomance 398 IPS

Price 19.88 ETH

BEST BUY

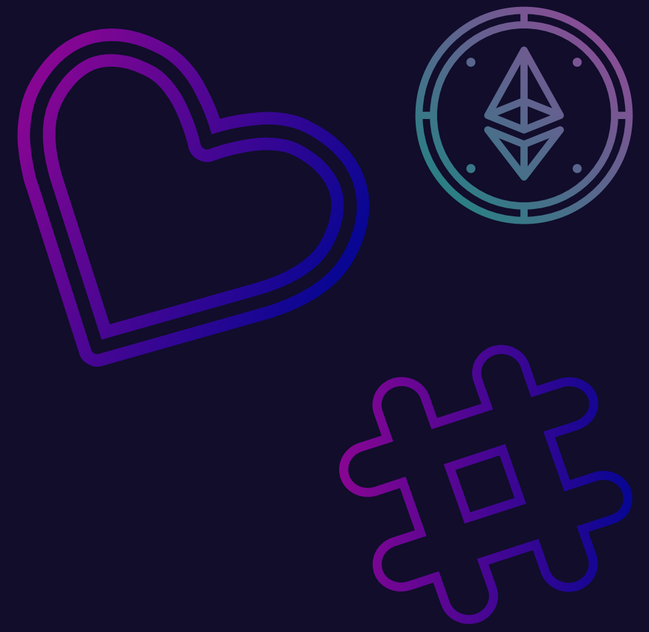
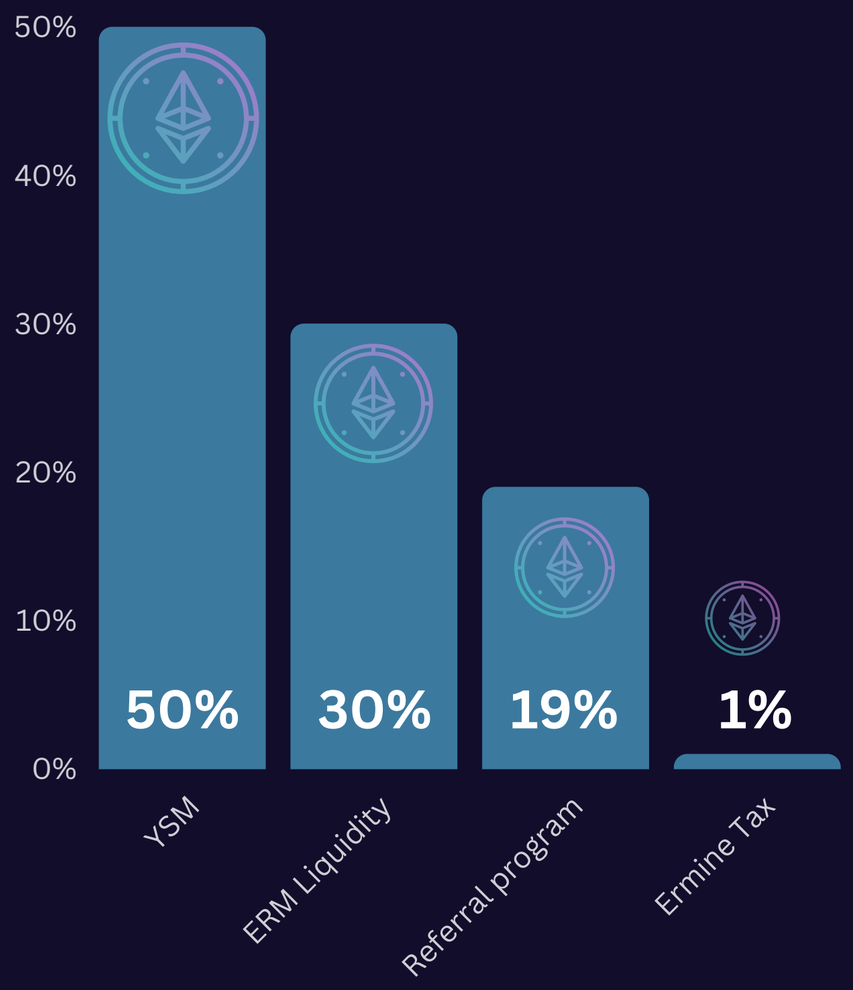
Benefits of virtual miners Ermine



- Eco-friendly
- Stored in a crypto wallet as an NFT
- Has no physical volume and masses
- No maintenance required
- Electricity consumption is not required
- Works under a smart contract without freezes and breakage
- No overheating issues
- Doesn't make noise

Ethereum distribution from sold Ermine miners

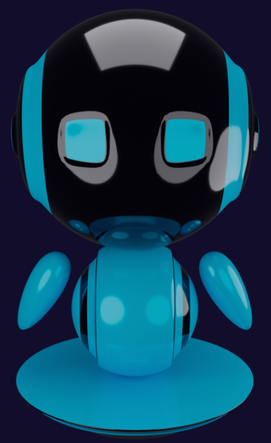


Half of the collected Ethereum is sent to **yields smart contracts** for subsequent turnover.

The **30%** Ethereum sent to the **built-in liquidity pool** provides liquidity to the ERM token and will provide the functionality of the **ReturnVM** miner return system.

19% goes towards Ermine promotion and referral program.

Ermine will receive **1%.**



Profit generation

Profits are generated in Yield Smart Contracts (YSM).
YSM profits from trades on the DEX and provides liquidity to mining pools.
Therefore, miners get their Ethereum.

Stages of YSM development

I - YSM is run by trusted people

II - Hybrid management (algorithmic trading is added)

III - Manage trading algorithms

Bonus pools (staking)

Get rewarded for depositing your miners or Ermine tokens in bonus pools.
3 pools will be launched with different conditions and **Units** limitation.
1 Units = 1000 ERM = 1 IPS

	Bonus pool 360	Bonus pool 720	Bonus pool MAX
	10,000 Units	10,000 Units	20,000 Units
	APR 36%	APR 72%	APR 80% - 480%
Withdrawal:	no limits	1 time in 30 days	1 time in 60 days
	FREE	OPTIMAL	BEST YIELD

ReturnVM miner return system

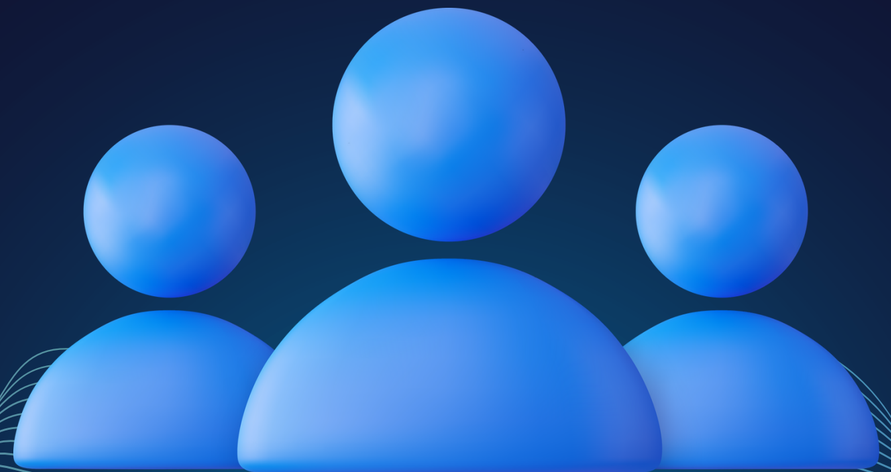
The ReturnVM system is a way to return a miner back to Ermine and get 30% of its price in your wallet.

ReturnVM uses a built-in liquidity pool and will refund you the cost of the miner in Ethereum cryptocurrency and Ermine tokens 50/50.

Referral program invite-to-earn

Invite new members. For purchases made by your invitee, you will earn Ethereum cryptocurrency and Ermine tokens.

The amount of the reward will depend on your status and can be 8% - 19% of the amount of miners sold in the Ethereum cryptocurrency and the reward in Ermine tokens (6 - 30 ERM).



Profit for Ermine

- The weighted average profit from the sale of virtual miners will be 4%.
- Exchanging ETH for ERM or ERM for ETH in the built-in liquidity pool is subject to 1% tax.
- Profit from YSM 1% of YSM income.

Market competition

Most projects in DeFi compete with each other.
Ermine will compete with platforms that allow yield farms or Ethereum staking.

LIDO

Yearn Finance

Investment attraction

The Ermine team plans to raise funding in two rounds.

We will raise only $200,000 in the seed round.
Goals: to register a legal entity and obtain the necessary licenses, protect intellectual property, audit smart contracts, launch Ermine Store, BLP, Staking, promotion and marketing

In the second round (IDO) we have to raise $1,050,000
Goals: team expansion, listing of DEX, CEX, launch of virtual mining and yield smart contracts, preparation of training materials, participation in forums and conferences, project development
